

Learning through failure in Interdisciplinary and transdisciplinary projects

Survey developed by Dena Fam and Michael O'Rourke | Details

Purpose of the survey

The survey aims to gain insight into participants' experiences of failure in interdisciplinary and transdisciplinary projects and how the reasons for project failure may differ from collaborative projects that do not cross disciplinary boundaries.

A link to the short survey '**Learning through failure in Interdisciplinary and transdisciplinary projects**' is available here: <https://www.surveymonkey.com/r/SHM8X6M>. It should not take you more than 6-10 minutes of your time. This survey was piloted and refined over the last few weeks to ensure it is relevant to your work and easy to respond to! (though any feedback is welcome...)

Data collection and use

In agreeing to participate in this survey, we will ensure:

- Your individual responses to the survey will not identify you in any form. We have sought to design the survey to collect both qualitative and quantitative data that does not identify individual survey participants
- Data collected through the survey will be shared with all participants once the survey has closed in a form that does not identify any survey participants
- Any published material, either workshop presentations or publications will be sent to you prior to publication for feedback and ensure you have the opportunity to withdraw your survey comments if desired

Informed Consent

On the basis of you participating in this survey, this will be considered as informed consent, and that you agree with the purpose of the survey and how the data will be collected and used (see detail above).

This project and ethics application was approved by the [Institute for Sustainable Futures, University of Technology Sydney](#) – please contact [Dena Fam](#) for further information.

Deadline

10 July 2019
